EDUCATION

Northeastern University

Master of Science in Data Analytics Engineering

– Coursework: Fundamentals of Data Analytics, Data Management for Analytics

Boston, MA

Sep 2025 – Dec 2027

MET Institute of Engineering

Bachelor of Engineering in Electronics and Telecommunication Engineering

Nashik, India

Jul 2019 – May 2022

EXPERIENCE

DataLoft

Front-End Developer

Feb 2024 – Jun 2025

Remote

- Developed innovative dashboards and web applications for enterprise clients using **React.js**, **Node.js**, and **MongoDB**, improving data visualization speed by 30% and decision-making efficiency.
- Redesigned user interfaces with responsive layouts in **HTML**, **CSS**, and **React.js**, enhancing usability and increasing user engagement by 25%.
- Applied analytical and problem-solving skills to optimize backend APIs and improve data performance by 40%.
- Collaborated closely with backend developers to ensure seamless **REST API integration**, enhancing overall system reliability.
- Conducted code reviews and UI testing to maintain high-quality standards, reducing post-deployment bugs by 20%.

Fortune Digi Marketing

Design Engineer

Feb 2023 – Nov 2023

Nashik, India

- Designed and launched 70+ client websites to strengthen digital presence using **WordPress**, **WIX**, and **Canva**, improving page performance by 30% and client retention rates.
- Automated repetitive content workflows using custom templates and scripts, increasing marketing efficiency and reducing turnaround time by 40%.
- Collaborated with cross-functional teams to plan and deliver projects efficiently, improving communication flow and delivery speed.
- Maintained project documentation and onboarding guides to support new team members and ensure knowledge continuity.

TECHNICAL SKILLS

- **Programming:** Python, Java, SQL, JavaScript, C++
- **Frameworks & Libraries:** React.js, Node.js, Express.js, NumPy, pandas, TensorFlow
- **Data Analysis & Visualization:** Power BI, Tableau, Matplotlib, Jupyter Notebook
- **Databases:** MySQL, MongoDB
- **Tools & Environments:** Linux, Google Colab, RESTful APIs

PROJECTS

Smart Wheelchair System

C, C++, Arduino, Proteus, AT Commands

- Designed an IoT-based health monitoring and location tracking system for individuals with disabilities.
- Reduced emergency response time by 50% and enhanced user safety and autonomy.

Air Pollution Monitoring Device

Python, IoT, Arduino, Sensors

- Developed an IoT-driven device to monitor and reduce vehicle emissions, improving air quality by 50%.
- Implemented real-time analytics and automated alerts for environmental data collection.

Gesture Sensor Technology (GST)

Python, IoT, Image Processing

- Built a computer interaction system using hand gesture recognition, improving task efficiency by 40%.
- Applied Python-based image processing techniques to enhance user interaction accuracy.
